DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Insulated Gate Field Effect Transistor Using a Buried-Type Gate Electrode Structure.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

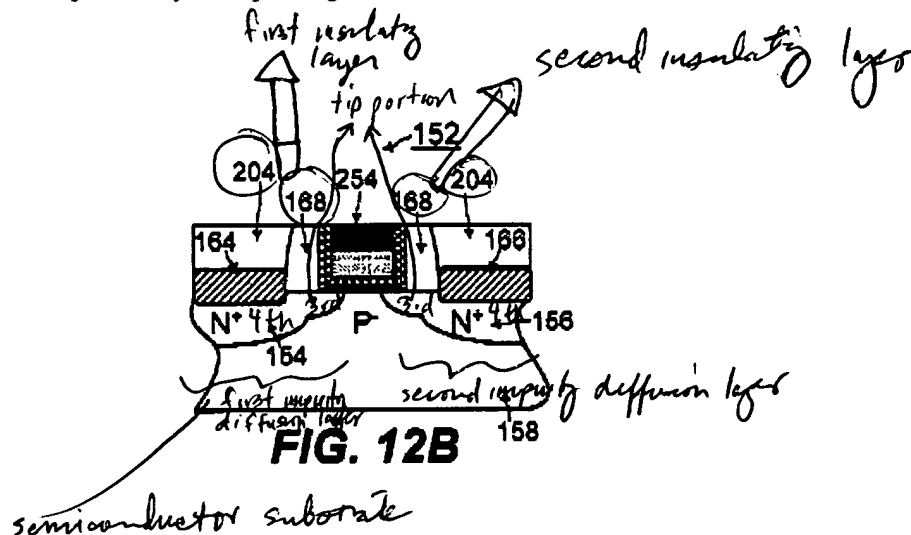

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 14, 15, 17, and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Xiang et al. 6,159,782. Xiang discloses (see, for example, FIG.12B) an NMOSFET (semiconductor device) 152 comprising a P-well (semiconductor substrate) 158, drain (first impurity diffusion layer) 154, source (second impurity diffusion layer) 156, spacers/insulator material (first insulating layer) 168/204, spacers/insulator material (second insulating layer) 168/204, opening (trench) 212, high dielectric constant (gate insulating film) 223, and gate electrode material (gate electrode formed as a conductive layer) 232. In column 6, lines 50-52, Xiang discloses the high dielectric constant being

Art Unit: 2815

Ta₂O₅. In column 5, lines 28-30 and column 6, line 1, Xiang discloses the spacers and insulator material respectively comprising silicon dioxide.

Regarding claim 18, see, for example, FIG. 12B wherein Xiang discloses a drain salicide/source salicide (metal silicide layer) 164/166.

Response to Arguments

4. Applicant's arguments filed 5/24/06 have been fully considered but they are not persuasive.

The Xiang reference has been interpreted so that the first insulating layer is elements 204, 168 on the left side of the gate electrode, and the second insulating layer is element 204, 168 on the right side of the gate electrode. These elements are made of the same material, silicon dioxide, and therefore, are construed together as a first insulating layer or second insulating layer.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
